*Grace Kelly McGovern for New York State Assembly
Vote Row B—Democrat on Nov 7th, 2006*

Paid for by the New York Democratic Committee

It takes vision and leadership for us to realize our hopes and dreams.

Without Leadership... we would never have made it to the new world, space, or the moon. We would never have discovered vaccines, DNA, performed the first heart transplant, or helped families through

Grace with her husband Frank, their daughter Grace, and three sons Francis, Brendan and Kieran.

in-vitro fertilization. So why is the incumbent standing in the way of stem cell research?

Dear to my heart is the hope that stem cell research holds the most promise for medical science. Stem cell research has the potential for curing millions of human beings with debilitating illnesses such as diabetes, Parkinson's, Alzheimer's, and muscular dystrophy.

Hundreds of thousands of infants have been conceived via in vitro fertilization in the past 28 years. Many more embryos have been discarded in this pursuit. Presently over 800,000 unused blastocysts, created for this purpose, are slated to be discarded. Should they end up in the garbage or be used to prolong and enhance the lives of our loved one?

And New York is losing its talent pool as scientists are moving to states where funds are being allocated towards stem cell research. New York State should be a leader in stem cell research and enact a law to fund it.

In Albany, I will fight for the health and welfare of our families.

Grace
